

## Scientists Claim Islands On Atlantic Coast Are Being Slowly Washed Away

Prince Edward Island and the Magdalen Islands are being steadily washed away by the sea, according to an expert government hydrographer who has just completed a survey of their coastlines. Soft red soil of these Gulf of St. Lawrence islands, without the protection of solid rock formations, is being washed away by the sea. In two places Prince Edward Island has been nearly cut in two.

"But islanders need not worry," the expert, H. L. Leadman of Ottawa, commander of the hydrographic survey ship Cartier, reassured us. "Mother Nature acts slowly and terra firma is guaranteed to come." Then with a laugh he added: "We'll probably all be washed away before these islands disappear. The process is slow."

Of course there were points that were disappearing faster than others. "The Magdalen Islands are changing continuously. There's Old Harry Head on Coffin Island that is falling away at the rate of 20 to 30 feet a year. The soft red sandstone is just disappearing for the cliff drops sharply down to two fathoms and there's no sign of where the soil goes."

Prince Edward Island was a scant two miles of being cut in two by the Hillsboro river and the inlet on the north side. But the wearing away process had eased up for the moment but had defeated its own purpose by building up sandbar protection against its shores.

The Cartier has been employed since 1910 in surveying Maritime provinces and Gulf of St. Lawrence waters. It has just been laid up for the winter at Charlottetown, after sounding an area of 12,600 square miles bounded by the northern tip of Cape Breton Island, the Gulf of St. Lawrence and the Gulf of Fundy.

The ever changing coastline makes constant vigilance necessary in order to preserve the safety of seafarers. The Cartier is a quasi policeman searching for uprisings of rock, arch-enemy of liners.

In the chart-room, this 700-ton government survey ship is the magic eye that penetrates fathoms and automatically takes photographs of the ocean bottom.

"That machine," said Commander Leadman as he pointed to an intricate arrangement in the corner of the chart-room, "is the most modern type of echo sounding. It photographs a picture of the bottom by a system of sound vibrations."

Then he unrolled several feet of pictures that showed the bottom of the sea. They were in the form of St. Paul's Island at the northern tip of Cape Breton.

"See those vague objects above the ocean floor?" he asked, pointing to its indistinct outline. "They are schools of fish which inadvertently got photographed. You know when schools of fish are close enough they too return sound waves that are recorded by the sensitive apparatus."

Saline density and low temperatures sometimes make the machine inaccurate when the experts had to recalculate the actual depth of water. In the Gulf of St. Lawrence, 200 fathoms down, the water was below freezing, registering minus two and minus three degrees centigrade.

The Cartier's work was mostly a task of sitting in the gaps in British Admiralty charts, plotted as early as 1812, Commander Leadman explained. Once in a while they ran across dangerous shoals. Off Cape Whittle on the Labrador shore, adjacent to the shipping lane, they had located a threatening rock 30 feet from the surface.

In surveying the coastline, aerial photography was done first, then with it as a guide, the Cartier began her submarine photography. There was a far cry from the days of the early sounding of the gulf by the admiral with their crude apparatus to the ocean-floor photography of today, the government expert remarked, but the admiral's small scale charts are surprisingly accurate," he added.

The Cal Club Show of the Dominion Boys' and Girls' Farm Clubs at the Sherbrooke Winter Fair held recently was the largest assembly of its kind at a provincial exhibition. Two hundred and twelve Cal Club members from all parts of the province of Quebec took part in showing 160 calves and yearlings and in the different judging contests for selecting team calves to the Royal Winter Fair, Toronto.

### Antelope Herds Increase

Ranchers Claim That They Are Becoming A Nuisance

Harrassed by ever-increased herds of antelope, steel-footed roamers of the foothill country, southern Alberta ranchers are wondering what could be done to save their pastures for cattle and sheep.

The animals, once threatened with extinction, were protected with conservation measures and have multiplied so rapidly an open season was declared this year but the Royal Canadian Mounted Police reported no applications for the special licence to hunt them have been received.

The license, costing \$5, allows hunters to bag two of the antelope. Cattlemen complain the antelope are eating grass needed for cattle and sheep, besides attacking hay stacks. One Wild Horse, Alta, rancher said it costs him the wages and keep of a man and the keep of three hounds in his efforts to drive the animals from his land where they eat his alfalfa, break the pasture of his cattle herds.

Near Wild Horse, in southeastern Alberta, a herd of 1,000 antelope was reported, while other large herds were seen within a mile of Cochrane, a mining town eight miles west of Lethbridge.

Had not conservation measures been taken, it is doubtful whether any of these antelopes—the pronghorn, bighorn, and caribou—would have survived. Protected in 1914 and 1915 by establishment of sanctuaries in lawasaw and Newmann national parks, the antelopes have increased to thousands.

Fleah of the animals is very detectable, which accounted for the protective measures taken. Indians were killing them wholesale before game officials stepped in.

Hunters, however, are prevented by the short open season—Nov. 1 to 15—and the bag limit of two, from giving any material assistance to ranchers.

### Problem For Hostes

Masterly Stroke Of Housewifery Made Difficult Situation

Suppose you were the wife of the owner of Massachusetts, suddenly called upon to serve dinner to a said French admiral and 300 officers. You had invited the admiral, but never guessed he would ask to bring all his men with him. Where would you get your food? In the Boston of her day, including fresh milk for so much home cooking? asks a writer in the Boston Transcript. Nowadays the task would be simple, and orders would be given by telephone. But Mrs. John Hancock, wife of the Bay State's first governor, faced a real dilemma. In the Boston of her day, a reliable historian tells us, it was fully "impossible to secure in legitimate milk enough for such a multitude at short notice. So, Mrs. Hancock dispatched her servants to the Common with direction to milk all the cows grazing there and to send to her any person who complained. The owners were rather amused than offended by this masterly stroke of housewifery, and no one is known to have protested.

### The Made Good Impression

The young man waited patiently while the girl at the cashier's desk looked carefully at the new \$10 bill but he had just handed her. She turned it over a couple of times, held it up to the light, felt it with her fingertips and then almost reluctantly rang up her cash register and counted out the change.

"Would you know a had one if you saw it?" the young man asked. Outraged surprise flitted across her face and then she turned away and shook her head. "I don't think so," she said, confidently, "but the boss was looking and it makes a good impression on him."

### Reached New Record

Immigration into Palestine reached a new record in the history of the country with the immigration of 52,000 Jews during the first ten months of 1935. This is an increase of 10,000 Jewish immigrants over the total number for 1934.

The mushroom is very sensitive to changes of temperature and to moisture. There is no one who is not a

### CANADA HONOURS FAMOUS ADMIRAL'S FEAT

Trafalgar Day, the anniversary of Nelson's great victory over the French navy at Trafalgar, is commemorated each year in the Mother Country by the decorating of the famous Nelson Column in London. Here we see the Hon. G. H. Ferguson, after they had placed Canada's wreath at the foot of the Column.

### Dairy Industry Of Canada

Official Of National Council Sees Big Export In Future

Appeal for "close and intelligent consideration to the betterment of Canadian agriculture" was made by Allan C. Fraser, secretary manager of the National Dairy Council of Canada.

Speaking at a Canadian Club luncheon in Montreal, Mr. Fraser referred to what he called "the romance of Canadian dairying" and described the industry as part of the life-blood of the nation.

History of the dairying industry was traced by Mr. Fraser from its first stages in Asia, 2,000 years before Christ to the present day when in Canada alone there were 3,500,000 milking cows "operated" by 315,000 farmers. These farmers, he said, received an aggregate of \$200,000,000 per annum for their milk products which he said provided the "elusive" of life.

One of the great troubles in the Canadian industry, however, was the lack of uniformity in production. He said: "For instance the provinces of Quebec and Ontario do not produce as much as they consumed yet the prairies, a long way from the eastern markets, produced more than could be used there."

It was such problems with which the industry was confronted, said Mr. Fraser, but with careful and intelligent consideration for these problems he thought "the day is not very far distant when we shall be pretty definitely on an export basis for a considerable proportion of our production."

This, he concluded, would be the answer to the difficulties outlined.

Shipments of feeder cattle brought from Western to Eastern Canada to be fattened under the Dominion Feeder Policy totaled over 2,000 head for the month of September.

### Excessive Road Speed

Highways In Good Condition Are Temptation To Drivers

Nether the authorities nor the public can afford to ignore the fact that traffic experts are practically unanimous in declaring that speed is the outstanding cause of highway accidents. Automobiles of today are capable of making greater speed than ever before. They can be operated so easily over roads that, generally speaking, are in excellent condition that drivers unconsciously hit their rate of travel to an unsafe speed. However mechanically perfect an automobile may be, it cannot be brought to a stop as quickly when running at 50 miles an hour as at 30. There is no doubt that thousands of accidents happen because motorists who do not consider themselves reckless drivers forget that at any moment they may be confronted by a situation that necessitates a quicker stop than they can possibly make.

Baltimore Sun.

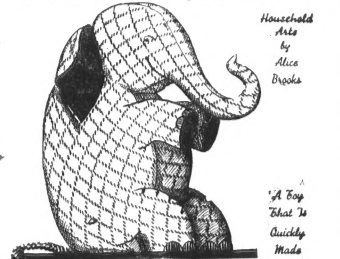

### Game Ducks Disappearing

Conservation Methods Must Be More Rigidly Enforced

Six types of game ducks in North America are threatened with extinction unless conservation methods are more rigidly enforced and natural enemies of the ducks are combated. Harry C. Oberholser, senior biologist of the biological survey at Washington, said in Toronto recently. Mr. Oberholser was there for the opening session of American Ornithologists' Union convention.

The shoveler, redhead, canvas back, gadwall, ruddy and buff-breast are fast dying out, he said. Contributing causes to their rapidly approaching extinction were pollution of their feeding grounds by oil waste from ships and manufacturing plants, duck disease and destruction of their eggs by crows.

## Make This Doll Elephant Mascot

EVEN though the circus isn't here, this elephant gets applause. That's certain—whether he's a toy for the baby or a mascot for that young lady who has her favours for football stars. He's a merry fellow and you'll be merry, too, in making him, for he goes together so easily. Do him in a gay print, do him in velvet—he's a choice in either.

In pattern 5461 you will find a pattern and directions for making an elephant about 10 inches high; material requirements. The pattern is in the form of a coin (coin preferred) to Household Arts Dept., Winipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg. There is no Alice Brooks pattern book published

## Responsibility Of Research Workers In Regard To Human Welfare

### Whales Attack Boat

Exciting Experiences Of Fishermen In The Bay Of Chaleur

A vicious attack by five whales while a xth, entangled in the anchor cable, threatened to pull their 25-foot boat beneath the surface in the Bay of Chaleur is described by James Daley and two other fishermen of Slenhaven, N.B.

After the boat anchored and threw out a line the boat began jerking from side to side as the bow lowered. The water seemed when five whales, estimated by Daley to measure between 40 and 50 feet in length, came to the surface.

"One at a time, another three followed began charging the boat, then kept at it for about an hour," he said. "As soon as they got close to us they dove under. Several times I would have touched them with an oar. Quite often their backs just scraped our keel as they went underneath. They were going so fast that when they came up on the other side and turned to come at us again they added right over on their sides. Several times their tails came within a foot of smashing the boat. When by their splashing and blowing the pretty sea stirred up."

"They were coming closer each time they charged, and I knew that it would only be a matter of time before they would strike the boat. I decided to cut the cable, and we got up to the bow. Right then it was about eight inches above water level."

"We gripped the cable to pull it around the side to get it at it. It was a real something else, and the bow came up with a jerk. The five whales charged once or twice more, and then disappeared. It was the last I saw of them. I was ever in it all my 30 years fishing."

### Chalk As We Know It

Was Made Conventional For School Use By Dr. Field

One hundred years ago school chalk as we know it, was invented. The man who brought this priceless boon to the classroom was Dr. Francis P. Field, of Waltham, Mass. Up to that time the chalk used was the crude material brought from England, which was far less than satisfactory. Dr. Field hit upon the idea of pulverizing the crude chalk, removing the grit, and then moulding it into convenient sticks. Of course there have been many refinements since that time, but the boys and girls in school today as well as those whose schools are over, might like to thank Dr. Field on this centennial of his invention.

The blackboard with its chalk illustrations of the countless school days, from the drawing from the stratosphere reaches of mathematics, has been an essential aid in the promotion of education. It goes back to the days of kindergarten to university. The Chinese philosopher said, "one picture is worth 10,000 words." He was paying an indirect tribute to the blackboard and its 100-year old teammate, chalk.

### Heading For Danger Zone

Enthusiastic Says Moon Will Soon Disintegrate

The moon eventually will disintegrate into countless particles, bathing the earth in perpetual moonlight, Sir James Jeans, noted British scientist, has predicted.

"We have good reason to believe the moon soon will split into pieces," the physicist, head of the Royal Astronomical Society, declared.

He said the moon is heading for a danger zone near the earth and will break in two, then fall into eight segments, which eventually will become myriads. These particles will resemble Saturn's rings, and could continue material on the earth," he said.

### Proved Idea Was Wrong

At one time the late Andrew Carnegie believed that Great Britain were to survive she must ship the royal family back to Germany. In 1901, however, the established church and the nobility and reorganized on American lines, with a President, Senate, supreme Court, and a navy. The master shot a hasty bank into several English publications to further that end by propaganda and got, of course, exactly nowhere.

There are plants which upon use and at such definite hours of the day it is possible to tell fairly accurately time by them.

Science is growing into a Frankenstein monster which soon the scientists of the world themselves may be able to hold in check.

This fear is expressed by Sir Richard Gregory, one of the greatest scientists in Britain. Other scientists agree with him.

Two years ago, the British Association formed a "brain trust" in an attempt to put the monster in chains, but Sir Richard now admits that the attempt has failed.

A short time ago, Sir Richard in a dramatic speech at a Rotary luncheon at Norwich, Norfolk, defended the modern scientist and tried to explain that the man with a test tube is not a man of mischief. He said that the use of good or evil of a discovery depended on the community.

Now, however, Sir Richard has changed his mind and frankly admits that there is justification in the increasing uneasiness and suspicion with which the ordinary man is viewing the efforts of the laboratories. "Ethical considerations are almost totally neglected in modern scientific work," he observed. "To them new knowledge is the thing."

He said that he saw a description in a technical journal of some new mustard gas.

The scientist who published that paper and spoke of his work as a mustard gas, had merely effected a re-grouping of certain compounds.

The movement was merely an interesting piece of research in organic chemistry, and he just stated that the world has another dangerous gas.

"The biggest job which faces us today is to solve this old problem of the responsibility of the scientist with regard to his discoveries and the rest of the community."

"One item of research properly applied might find work for tens of thousands, and another thousand would do work. One result of research wisely applied may save human lives and another destroy them."

"It is manifestly wrong that the scientist's responsibility should end with the announcement of his discovery."

A G. Church who, as an executive of the British Association of Scientific Workers, was concerned with the British Association plans for a "brain trust" to maintain a check on discoveries and their applications is not hopeful for the future. He participated in the "brain trust" and has met scientists who have made themselves into a profession with a corporate sense of responsibility like lawyers, doctors and others, have failed absolutely.

"Some time ago we made an attempt to find out how far scientists were prepared to limit themselves against work which might have harmful potentialities to the community."

Professor Frederick Soddy suggested resolution that members should not accept subsidies to engage in special research work into problems for military purposes.

"Our members would have none of it. Eventually a resolution was passed to the effect that university teachers should not accept subsidies for such work as this would be contrary to the spirit and tradition of learning."

The trouble is that the average scientist is far more arrogant about his work than the normal man, and he declines to admit any measures which he considers a restriction on the pursuit of knowledge.

"But this freedom in research has given rise to the danger of today. We ought to have an ethic like other professions. It is up to the great leaders of science give a lead in this respect. It is time that the man in the laboratory realized how his work affects the man next door."

### The Only Drawback

Two old settlers, confirmed bachelors, sat in the backwoods. The conversation drifted from politics and finally got around to cooking. "I got one of them cookery books once, but I never could do nothing with it."

"Too much fancy work in it, eh?" "You've said it. Every one of us receives books of that kind. Take a clean dish, and that settled me."

A locomotive built in England for use on a mountain railway in South Africa has six separate engines, any two of which can be disconnected and used as an emergency without impairing the efficiency of the others.

## The Bassano Mail

Published at Bassano, Alberta, Canada  
Subscription \$2.00 a year; Foreign \$2.50  
Nesbitt Publishing Company, Publishers  
James L. Nesbitt, Editor

May God forbid our saying on this page the things that merely please. We would be humble in our opinions; we would be considerate of the opinions of others; but we would not be unkind of the immutable laws of cause and effect, for therein lies the wisdom of the ages.

### THE REAL CHAMPIONS

Alberta having won another world's wheat championship through the efforts of Frelund Wilford of Stavely, it behooves this newspaper to make comment thereon. In fact all up-to-date newspapers will be flapping their wings (figuratively speaking) and crowing over the event. And it's something to crow about, too.

However, the quality in Canadian wheat, which the world looks for when it makes its purchases, comes from the production of a quarter of a million common farmers who haven't much time to carefully pick out kernels and do them up for a seed show. If the average farmer could get quality into his grain from the variety seeded and from the soil and climate, then it is just too bad.

Varieties of grain are developed by men with long training in the business. Then trained growers produce the best qualities in the way of seed from the original supplies. From this source the run-of-farm farmer gets his seed grain. A tremendous responsibility thus rests on the cerealist.

Of course it takes real ability to produce wheat which can win a world's championship. The selection of the kernels and the fixing up of the sample mean a great deal, too, and only a well-trained man can do that job. The average farmer has not much of a chance in that field of specialization.

The moral of all this is that, while we can cheer for the wheat champions, we must never forget the ordinary farmers who supply the big quantities of wheat from which the west gets its living.

They don't get many cheers but, all in all, they do a mighty good job.

### PAYING THE BILL

Sir Walter Scott aptly describes the fickleness of human nature when he told of the incident wherein

"The crowd, whose vulgar throat,  
Strained for King James's morning note,  
Now cheers for Douglas."

Such is the way of crowds; always aroused over something immediate; impatient of causes or consequences.

Crowds yelled for railways, for hard surface roads, for bridges, for irrigation and drainage systems, in Alberta over the years. Of course the government had to provide these.

They demanded a university and normal schools and got them.

Technical schools and agricultural schools were next in the way of demands and they were built.

Old age pensions, women's compensation, and other social needs were asked for and granted.

Now, mind you, most of these things are good and proper. In fact they are part and parcel of civilization and our standard of living.

But the point is they all cost money, most of which was borrowed. The taxpayer has now a big bill to foot. Heavy interest charges must be met each year.

Nobody likes it when it comes to paying the bill.

The howl of the crowd has a different tune now—more like a whine.

### THE HUMAN FACTOR

A survey of business statistics in Canada and the United States reveals a distinct upward trend. In fact recovery in business has reached such a stage as to indicate that the depression period is definitely over and the incline towards prosperity has begun. This will be a slow process, for a good deal of ground has been lost and the casualties during the depression were exceedingly heavy. Nevertheless the trend will be upward with occasional setbacks, provided no major catastrophe such as a great war intervenes.

It has been said the depression which began in 1929 covered the longest period of any such event in the world's history and descended to depths never plumbed by any previous depression. But every depression appears the worst to those who are living at

that time. We doubt very much if this was the worst depression the world has known and goodness knows it was bad enough. Careful observers have learned many things about depressions from watching this one closely, but it is evident no one has yet discerned a method by means of which these sad events can be prevented.

It is obvious that depressions are man-made and if they are to be prevented human nature must be changed. Selfishness is at the root of all the trouble. Lust for power and wealth among nations transcends everything else. The gloss of culture and civilization covers primitive passions but thinly. This fact is brought out by Dr. L. P. Jacks of St. Andrews University when he says: "I believe profoundly that the fate of civilization depends finally on the quality of human material that forms the living substance of society. Unless the human material is of the lasting quality, staying power, and general soundness which building material ought to have, their construction and reconstruction is doomed to miscarry. Improved social systems, schemes of economic and social control, new deals, prosperity loans, and security pacts, to say nothing of new moralities and new religions—I have not a particle of faith in any of them unless I am assured that the human material is sound and reliable."

### IN TIGERVILLE ON SATURDAY

Down in Hamilton, Ontario, on Saturday of this week an ambitious rugby football team from Winnipeg, Manitoba, will try to wrest from the Hamilton Tigers the football championship of the Dominion.

The west has never won a Canadian championship in rugby. Goodness knows teams from the "great open spaces" have tried often enough but they never seemed to have enough luck or ability or a combination of the two.

Now Winnipeg, with a bolstered lineup including many crack players from North and South Dakota, invade the city "under the mountain" to try conclusions with the rugged Tigers.

Hamilton has always been a great rugby town. The team has always been known by the name of "Tigers" and usually a big tough outfit with little consideration for the niceties of life. Opponents have found an elbow in the jaw or a fist in the eye quite common-place when scrimmages were held. A little "roughing up" was neither here nor there with the Hamilton Tigers.

Winnipeg has bright hopes of winning. No western team has ever been so carefully coached and so consistently "brought along." The "Peggars" should be at their peak when the kickoff comes. They have a line said to be unequalled in the North American continent, which means in the world. The backfield is composed of a galaxy of stars which might well grace any All-American team.

On careful consideration the Winnipeg team look on paper as almost unbeatable. That was the calculation in view when they were assembled. On form, Winnipeg certainly should win.

But well's string along with the rough and tough Tigers from Hamilton.

### RECONCILIATION

Everyone has some faults, few or otherwise.

This is not said with a philosophical turn of mind; we all acknowledge the fact. The statement may also be applied to cities, towns and villages.

Recently this paper came to words of gentle harshness with a prominent daily paper in Calgary, in which our opinion of that city was stated somewhat baldly. Now don't take it too much to heart.

Have you ever noticed a litter of puppies playing around their mother? They gambol around in snarling playfulness, tumbling over one another and enjoying themselves hugely. One snaps at the mother and is gently cuffed as a reproach.

Figuratively speaking, we number ourselves among these puppies, and the mother, either of Calgary's daily papers.

The mother watches with interest the growth of her litter, protects them in their infancy, feeds them, plays with them, quarrels with them; and when the puppies grow up, they part with their mother on the best of terms.

And we would like to believe that a lasting fondness and good feeling exist between the mother and her puppies.

So we don't refer to the Foothills City all the time as Calgary—of all places. When in mild anger we bring out her faults, we still remember her in her best moods as the real, courteous Calgary that she is.

### AND THEN HE WROTE A LETTER TO THE EDITOR

Editor, Bassano Mail,

In reading H. G. Robinson's article in your paper of November 14, I am led to wonder where he gets his reasons for writing as he did.

He is correct in saying the title to his 40 foot list is, the government gives him that right and no one has ever talked of taking it from him or placing a lien against it except for taxes.

No Social Credit speaker that I ever heard claimed or suggested confiscation of private property. I have heard it denied time and again over the radio. Private property is sacred and is held on by the government's laws. And there is no government in Canada going to change it, or try to change it. I have before me statistics that say the banks of Canada had deposits on November 1, 1934, amounting to \$2,351,000,000, and they had loans amounting to \$1,389,000,000—a little more than half of all deposits loaned out. Through the 31 exchange banks of Canada, business to the amount of more than \$7,000,000,000 was transacted in the first months of 1934. There is no account of business done locally through the branch banks but no doubt it is a very large amount.

The amount of money in circulation issued by the Dominion government in 1934 was \$220,000,000, and of that amount \$15,000,000 was held by the banks in their reserve fund, leaving \$205,000,000 of government money in circulation. The banks had \$1,389,000,000 in deposits. In circulation in 1934, making a total of \$1,594,000,000 to do all the business of the country. Impossible to do all the business of the country on so small an amount of money.

The credit of the country was used to do this great volume of business. Bank checks looked by the depositors as low business is transacted. If a man wishes to borrow say \$500 he puts up security of government land, mortgage or chattel mortgage, and he then is given a bank credit of \$500. It is not taken from Mr. Robinson's account or any of the 4,000,000 depositors. Mr. Robinson is a new depositor. New wealth is created by bookkeeping. Just the same as billions of dollars of other business to which I have called your attention. I got the above facts and figures from a book of statistics published by the Dominion Bureau of Statistics, Ottawa. I will suggest that Mr. Robinson send 25 cents to the above address, get this book and study it, and he will then KNOW for sure that he does NOW about the finances of Canada.

It is a good book for anyone to get and study who is interested in the study of finances.

M.A.P., Eskine.

### "Brats" and "Squirts of Boys"

The Sheriff, commendable little institutional Journal of the University of Saskatchewan, has fallen under official disrepute because its student editors have published rather a hot argument against war.

Mr. Justice Embury of Saskatchewan, who was a broadcaster, is particularly outspoken in his criticism and speaks of "brats and squirts of boys" who write "lies in the press."

It all becomes an effort in the war-time forces to use that language towards the student body of Saskatchewan.

For it was these same "brats" and "squirts of boys" who were jockeyed and callded into enlistment in such numbers that the years of Arts '16 and '17 were practically wiped out on the battlefields of France.

These young students were not "brats" and "squirts of boys" when they were being urged, and even contracted in the arming, to secure their parents' consent to swell the Saskatchewan contingent so that the university heads could not admit with patriotic pride to the fine showing made by their institution.

If anybody has a right to condemn war in any warm and even immoderate language it is the "brats" and "squirts" of the University of Saskatchewan who only need look on the walls of their administration building to see what a dreadful and ghastly toll that late bloody business took of their innocent and unsuspecting numbers.—Vancouver Sun.

### Poem to Flusie

A bunch of germs were hitting it up  
In the bronchial saloon.  
Two bugs in the edge of the larynx  
Were jazzing a ragtime tune.  
Back in the teeth, in a solo game,  
Bet dangerous Ack-Korcho;  
And watching his pulse was his light  
Of love—  
The lady that's known as Flusie.  
"Casseroles" in The Gateway.

### The Workers of America

A good friend friend in Los Angeles sends us this picture of the labor situation in the United States:

Estimated population of  
United States 124,000,000  
Subject to Old Age Pension under Townsend Plan 50,000,000  
74,000,000  
Minors ineligible to work under Townsend Plan 60,000,000  
14,000,000

Number of unemployed, according to Father Coughlin 13,999,999

"This," she concludes, "leaves to reduce the country's requirements just myself and my husband, and I'm tired."—Exchange.

### Dinner Party

CHANCELLOR, Nov. 30.—A very delightful dinner party took place at the home of Mr. and Mrs. Nels Hansen on Thursday. Twenty-five guests were present. The table was arranged in a T-shape, and beautifully decorated in yellow and white, with long yellow tapers centering the table. After dinner, bridge was played until midnight, after which games were enjoyed. Honors at bridge were won by Mrs. J. M. Wheatley and Mr. H. F. Penke. The consolation prizes went to Mr. and Mrs. G. C. Phillips. Those present were Mr. and Mrs. Nels Hansen, Mr. and Mrs. J. M. Wheatley, Mr. and Mrs. C. P. Hall, Mr. and Mrs. Ross, 2 Hugh, Mr. and Mrs. Muir, Miss Marie Gromberg, Perry Barker, Mrs. H. (Channing), Mr. and A. E. Hobbs, Mr. and Mrs. H. T. Penke and Mr. and Mrs. G. C. Phillips.

### THE WORTHY CREW

Discontented? Job no good? Chief is never praining you.

Going elsewhere? Wish you could? Feeling bitter, tired and blue?

Sure you're meant for bigger things! Never get a chance, that's all!

Long to use ambition's wings; feel you're up against a wall.

Only just occurred to you—you well you scarcely like to ask—

But after all, what does he do, what is the Chief's important task?

Quite convinced you do the most? Of course you do not like to boast

You've other chances by the score. When this mood has you in grip

(As someday it's bound to do) remember a successful ship

Must carry, too, a worthy crew. When this mood nags at your heart

Reflect we can't all captains be. Each must play his special part—

Ships need crews when off to sea.

—L.D.N.

## STIMULATING LAZY \$ \$

You spend a dollar at Jim's grocery.

He may take it to Joe the Jeweler, who may take it to Frank the Furniture Man.

Now suppose you and 99 others and a hundred Jims and Joes do that every day. That gives a hundred dollar day business to the Jims and Joes and Franks. Now suppose the Jims keep the hundred handed them for a week, that would give the others in the chain a hundred dollar a week business instead of a hundred dollar a day business.

Naturally they can't pay as good rent or wages with a hundred dollar a week business as they can with a hundred dollar a day business.

Here's where advertising helps. It prods and tantalizes and tempts the Jims to pass the money on to the Franks, and the Franks pass it on to the Joes. Eventually they all have more to do with. And that's the greatest good of money.

### ADVERTISING STIMULATES LAZY DOLLARS!

A business man recently said: "We know just what the total payroll is in this town—that it is below 1928 levels and so we don't advertise."

What of it? There are probably as many dollars circulating as there were in 1914 and they were worth going after.

Moreover when there are fewer they should be kept more active so everyone can get a portion of hundred dollar a day circulation instead of hundred dollar a week circulation.

When the blood is thin the heart pumps it around faster so it can nourish the parts as well as though there were more rich units in it.

Advertising peps up the economic circulation.

advertising stimulates lazy dollars

## WORLD HAPPENINGS BRIEFLY TOLD

More than 80 anarchists have been arrested in Tokyo and Osaka and are being held on charges of planning an anarchist uprising.

The full name of the Duke and Duchess of Kent's son will be Edward George Nicholas Paul Patrick. It was unofficially reported. He will be known as Prince Edward of Kent. Canada, in time, will have a population of 17,000,000, it has been predicted by Prof. Griffith Taylor, formerly inducted into the new chair in geography at the University of Toronto.

People who live on streets with English, French and Belgian names in San Remo, Turin, Milan and other Italian cities have asked authorities to change them to "Adams," "Kosch," "Alc," or "Italia."

Sergeant Pilot Park, whose home is in British Columbia, and two other men of the Royal Air Force, were instantly killed when two planes collided 1,600 feet over the Albingdon station.

The Alberta government will enforce the provincial Trade and Industry Act, after certain changes, the Calgary branch of the Retail Merchants' Association has been assured by Premier Aberhart.

The Young Women's Christian Association announced that Lady Tweedsmuir, wife of Canada's new governor-general, had consented to become patroness of the association in Canada.

Another step in the modernization of ancient Palestine was taken recently when the Arab town of Tul-karem in the central part of the country was illuminated with electricity for the first time.

Notwithstanding the recent series of fatal aeroplane crashes, U.S. senate commerce committee investigators have concluded after a thorough survey that travel by air to-day is "three times safer than it was 10 years ago."

### Climbing Out Of Depression

British Dominions Seem To Be Leading The World

Which are the nations who are climbing most rapidly out of the depression? They are the British nations. Canada's trade leaped up 22 per cent last month. Inspiring news comes also from little New Zealand, where Mr. Coates, the finance minister, boldly states that the Dominion's economic problems are "largely solved." Cuts in being restored, emergency taxes reduced, pensions increased. On top of that Mr. Coates gives a new break to his countrymen. Population of New Zealand, 1,618,000; public works expenditure announced, \$5,630,000. That means the inauguration of new houses and amenities for New Zealanders at the rate of 13 to one a head—London Daily Express.

In Italy, where the cost of a radio receiver license is high, there are only about 200,000 listeners in a population of 40,000,000.

## Saskatchewan Winning In Fight Against Tuberculosis With Aid of Christmas Seals

Definite proof that Saskatchewan is winning out in its fight against tuberculosis is afforded by the steadily decreasing death rate from this disease and the lesser demand for accommodation in the three sanatoria of the province.

A few years ago, with these three institutions operating full capacity, over 100 patients had to be housed in regular hospitals. This total has now been reduced to 20, and within another year, it is confidently anticipated, will be reduced to 10.

The Alberta government will enforce the provincial Trade and Industry Act, after certain changes, the Calgary branch of the Retail Merchants' Association has been assured by Premier Aberhart.

The Young Women's Christian Association announced that Lady Tweedsmuir, wife of Canada's new governor-general, had consented to become patroness of the association in Canada.

Another step in the modernization of ancient Palestine was taken recently when the Arab town of Tul-karem in the central part of the country was illuminated with electricity for the first time.

Notwithstanding the recent series of fatal aeroplane crashes, U.S. senate commerce committee investigators have concluded after a thorough survey that travel by air to-day is "three times safer than it was 10 years ago."

### Preventive Work

The preventive work of the League, financed by the proceeds from the sale of Christmas Seals, is the largest and most effective for the decrease in the number of cases and in curtailing the spread of the disease. Clinics are held monthly at Regina, Moose Jaw, North Battleford, Swift Current, Yorkton, Canora, Melfort and Tisdale, at which free examination is available for all with symptoms of the disease or who have been in contact with a patient.

## Crochet a Rug For Your Home

Whether you use rags, wool or candlewick, you can make a stunning crocheted rug if you use this design. Three tones of one color or contrasting colors are effective. Use it in the bedroom, living-room or entrance hall—it will add much to your home. You'll find it an easy pattern to crochet. If you want to give someone something real big for Christmas, this would be a splendid choice.

In pattern 5469 you will find complete instructions for making the rug shown as illustration of it and of the stitch model; material requirements; and a list of the dealers.

To obtain this pattern send 20 cents in stamps or coin (cash preferred) to Household Arts Dept., Winnipeg: Newspaper Union, 170 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

### Was Entirely Trustworthy

Sir Frederick Ponsonby Given Secret Letters By Kaiser's Mother

Baron Sponby of Wessels, better known as Sir Frederick Ponsonby, for 20 years keeper of His Majesty's privy purse, who died a short time ago, had served in the households of Queen Victoria and King Edward and few of their aides enjoyed greater confidence.

He was descended on his mother's side from the second Earl Grey, author of the Reform Bill of 1832. He was the second son of General Sir Henry Ponsonby, for many years private secretary to Queen Victoria. He was appointed assistant keeper of Victoria's privy purse in 1894 and there followed a long series of highly confidential posts at Buckingham Palace. When the Empress Victoria, the Queen's daughter, widow of Emperor Frederick, was dying at Friedrichshagen in 1901 she summoned Sir Frederick from London secretly and entrusted to him her private correspondence, saying:

"I do not want a soul, certainly not Willie (her son the Kaiser Wilhelm II.) to know you have got them."

He succeeded in taking to London two large coded boxes and when the Empress died the grounds of the castle were surrounded by cavalry and police while secret-chests for the papers ransacked every room. He kept the letters for 27 years and then decided on their publication "in the interest of the general taxpayer."

When the letters of his mother were published in England in the Fall of 1928 the former Kaiser was reported to contemplate legal action to suppress the book. A few weeks later, however, it was said in Berlin that Wilhelm not only urged the unaltered publication of the letters in German, but had written a 1700-word introduction to the German edition of the letters.

### Pioneers Honored

Calm Evolved By Founder Of First Icelandic Settlement

The dramatic history of Icelandic pioneers who first landed on the shores of Lake Winnipeg in 1875, was fittingly marked 60 years after when a memorial was unveiled at Gimli, Man., by Captain Sigbjørn Jonsson, first discoverer of the site of what is now Gimli.

Jonsson, approaching his 80th year, brought the first group of Icelandic settlers to Gimli in 1875 from Moorhead, Minn., by way of Winnipeg. The party made the trip in snow conditions in Winnipeg, and sailed down the Red river and along the west shore of Lake Winnipeg to their new home.

The cairn, built of local granite stone, has a 13-ton red granite boulder fixed to the top, symbolizing the lasting qualities of the early pioneers. On the west side of the boulder, engraved in Icelandic and English, is the following inscription: "The first Icelandic settlers arrived here Oct. 21, 1875." The names of the various districts of the first settlement are carried on the reverse face of the cairn.

Roughly speaking approximately 50 per cent. of cold in the veins reaches the consumer.

Things could be worse. Housewives haven't started to pickle spinach yet.

### Puncture-Proof Tires

New Substance Prevents Rapid Escape Of Air In Blowouts

A new invention is a substance which the car owner inserts in the tube through the valve aperture. This compound is composed exclusively of natural products which, according to the sworn statements of commercial chemists, are by no means deleterious to the rubber. Floating freely within the tube it is thrown by centrifugal force against the periphery so that should the tire and be punctured or ripped, this material is immediately thrown by pressure of the air into the opening.

The result is that the puncture is immediately sealed by the substance. In case of a blowout, the substance prevents the rapid escape of the air and the car can be brought to a stop safely.

It is stated that this substance is not a conductor of heat and will not, therefore, transmit to the air the road heat absorbed by the tire tread. The weight and bulk of this substance are small. It cannot choke up valves, undergoes no changes during the whole life of the tire, and is perfectly innocuous to clothes and skin. Its advantages as can readily be seen, are numerous, one of the most important being that it gives a sense of security that enhances the pleasure of safe, carefree driving regardless of speed. The purchase price of this compound, incidentally, adds only 25 to 35 per cent. to the average price of a tube. It is at present being distributed widely in Germany and other countries.—Popular Science.

### Italy Produces New Wheat

Rapeseed About Three Weeks Earlier Than Old Variety

In two decades, Italy has raised the nation's average wheat yield from 15 to 24 bushels to the acre. (In the U.S. the average yield is only 14 bushels to the acre.) Now in an experimental tract near Rome, new strains of wheat have yielded 131 bushels to the acre. In addition this wheat ripens two or three weeks earlier than the old varieties and so escapes at a critical period the blistering winds from across the Mediterranean; it has a staunch straw which enables it to stand against wind and rain, and strong resistance to disease.—The Country Home.

### Endorses Light Clothing

Welsh Doctor Believes It One Preventive Against T.B.

During a discussion on his annual report, Dr. Milton Jones, medical officer for Llanfyllin rural council, said he found girls under 20 were less susceptible to tuberculosis than boys under 20 and said the reason was that girls wore scanty clothing, whereas the boys wore heavy clothes to get at them. Women, too, were less susceptible to tuberculosis than men because they were less likely to get it. When the doctor said that with correct diet nobody need suffer from tuberculosis a member remarked that doctors suffered from indigestion. Dr. Jones replied that that was because doctors were so often called away from their meals.

Followed Instructions  
"Now you must be very careful how you answer," said the counsel, "and not say anything that is not strictly true. You drive a milk cart, don't you?"

"No, sir."

"But I thought you did. What do you do for a living, then?"

"I drive the horse that pulls the milk cart, sir."

One large duck farm in Eastern Canada is planning to ship 25,000 boxes of ducks to England before the close of navigation at Montreal and to hold them in storage for subsequent sale.

## ASK YOUR DOCTOR FIRST, MOTHER

Before You Give Your Child on Unknown Remedy to Take

Every day, unthinking, mothers take the advice of unqualified persons—instead of their doctors—on remedies for their children.

If they knew what the scientists know, they would never take this chance.

Doctors Say PHILLIPS' For Your Child

When it comes to the frequently-used "milk of magnesia," doctors, for over 50 years, have said "PHILLIPS' Milk of Magnesia." It is safe for your child.

Remember this—And Always Say "Phillips" When You Buy. Your child deserves it; for your own peace of mind, see that you get it—Genuine Phillips' Milk of Magnesia.

Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Carry them in a tin of Phillips' Milk of Magnesia.

PHILLIPS' Milk of Magnesia

MADE IN CANADA

Fire Chief Battles Water

Rescued People From Flooded District in Montreal

Arthur Perron, acting district chief of the Montreal fire department, has celebrated the 50th anniversary of his joining the fire fighters. In the years since he joined the brigade he has been repeatedly credited for brilliant rescue work at bad fires, but his greatest rescue had nothing to do with his arch enemy, fire. In the half light of a below-zero dawn, a three foot water main burst in a crowded Montreal district. The streets were flooded and houses were collapsing when Capt. Perron and his crew arrived. Despite the imminent danger, however, this veteran smoke-eater rescued two entire families who were on the point of drowning. For his bravery he received the Royal Canadian Humane Society's life-saving medal.

Safety For Pedestrians

Pedestrians who must walk alongside highways at night will find their measure of safety increased if they carry a light. That is what the subject, Keystone Automobile Club officials pointed out at Philadelphia. A white handkerchief, for instance, displayed against dark clothing, increases a hiker's chances of being seen by motorists by approximately 100 feet.

### CHAPPED SKIN? NO!

Guy (shorty) Foster motored to Calgary on Tuesday on a business trip.

Alderman R. Calder of Medicine Hat is nominated to run again in the civic elections in that city in the near future. Mr. Calder is a brother of Mrs. A. McKee of Bassano.

A large number of hunters are in the district for the antelope shooting recently. Seventeen animals were noticed tied to cars going through on Monday the trophies of the chase, perhaps, but the wanton carelessness of the majority of these hunters in letting the wounded animals get away and die later deserves scathing criticism.

**Gem Xmas Dance**  
The R.C. Ladies of Gem will sponsor a dance in the Christmas holidays (date to be announced) with Mrs. T. L. Maguire convener.  
It is promised that the affair will be a big one. In keeping with the spirit of Christmas. You are asked to keep your eyes open for further announcement.

## Crowfoot

**CROWFOOT, Dec. 2.**—The Crowfoot bridge floods met at the school last Tuesday evening for the first time since the season. It was decided to meet each Tuesday evening till spring in the school house. The winners of the evening were Tom and Sid Rodbourne, while Wm. Rodbourne and Mrs. Hartley had the low score of the evening.

The people of this vicinity were very sorry to hear of the death of Mr. James Clarke, who passed away in Gleichen last Tuesday evening. Mr. Clarke was one of Crowfoot's earliest settlers and was held in high esteem by the many friends. We extend sincerest sympathy to his relatives, Mr. and Mrs. D. Clarke and family of Church, J. Clarke Sr. and Mr. and Mrs. J. Clarke Jr. and Sylvia Gladys in their bereavement.

Charles Merriam spent the week-end in Calgary. Ralph and Frank Holtan and Bev Stockman spent last Saturday shoveling snow and hauling hay. A pleasant picnic, boys, and can you go to Makepeace in a car now without getting stuck? We'll try it next Saturday night.

The Makepeace Bridge club had another very enjoyable evening last Saturday in the Makepeace school. The winners of the evening were Violet Campbell and Mrs. P. Holtan and the lowest score of the evening was made by Frederick Jorgensen and Jesse Walters.

Tom Mallon was a business caller in Calgary last week.  
Mrs. Charles Rodbourne returned home last Friday from the Bassano hospital and is feeling fine.  
Sid and Wm. Rodbourne, Ole Benson and Gordon Walker spent Friday helping Joe Roberto de-bug cattle. The boys report a very enjoyable time.

Mr. and Mrs. E. W. Campbell and Violet spent Sunday visiting at the home of Mr. and Mrs. P. R. Patterson of Calgary.
